

# 淡江大學 104 學年度日間部轉學生招生考試試題

系別：資訊工程學系三年級

科目：程式語言

考試日期：7月26日(星期日)第4節

本試題共 6 大題， P1 頁共 3 頁

本試題雙面印刷

## 1. (20%) Short Answers (簡答題)

- In C, there are two types of parameter passing (參數傳遞). Discuss these two types each with an example.
- In C, consider the variable declaration `int d[10]` and `int *e[10]`. Describe about what kind of data are stored in array `d` and array `e`.
- Give three main features in object-oriented programming. (描述物件導向設計三個主要特性)
- List three names of the mainstream objected-oriented programming languages. (列出三種主流物件導向程式語言的名稱)

## 2. (10%) What does the function `mystery1` do? If $n = 2468$ is passed to `mystery1`, what is the return value?

```
int mystery1( int n ) {  
    int r = 0, divisor = 1000, multiplier = 1;  
    while ( n > 10 ) {  
        if ( n >= divisor ) {  
            r += n / divisor * multiplier;  
            n %= divisor;  
            divisor /= 10;  
            multiplier *= 10;  
        } else divisor /= 10;  
    }  
    r += n * multiplier;  
    return r;  
}
```

## 3. (30%) Write a function $sum(1, n) = 1+2+3+\dots+(n-1)+n$ using

- Iteration using “for” loop (10%)
- Iteration using “while” loop (10%)
- Recursion (需要用遞迴) (10%)

科目：程式語言

11-2

考試日期：7月26日(星期日)第4節

本試題共 6 大題， P2 頁

4. (20%) Modify the following code to produce the output shown below. Use proper indentation techniques. You may not make any changes other than inserting braces (修改下面的程式碼，以便能夠達成(a)~(e)的輸出，修改僅能以加大括弧方式為之，如果無法產生所要的輸出，請說明無法修改).

```
if ( y == 9 )
if (x == 4)
printf("@@@@\n");
else
printf("#####\n");
printf("$$$$$\n");
printf("&&&&&\n");
```

(a) Assume  $x = 4$  and  $y = 9$ ,  
the following output is produced.  
@@@@  
\$\$\$\$\$  
&&&&&&

(b) Assume  $x = 4$  and  $y = 9$ ,  
the following output is produced.  
@@@@@

(c) Assume  $x = 4$  and  $y = 9$ ,  
the following output is produced.  
@@@@@  
&&&&&&

(d) Assume  $x = 4$  and  $y = 7$ ,  
the following output is produced.  
#####  
\$\$\$\$\$  
&&&&&&

(e) Assume  $x = 4$  and  $y = 7$ , output nothing.

49-3

考試日期：7月26日(星期日)第4節

本試題共 6 大題， P3 頁

5. (10%) Recursion Trace: Show the output when the function Func(72, 108) is called.

```
#include <stdio.h>
#include <stdlib.h>
int Func(int a, int b) {
    printf("%d %d\n", a, b);
    if(a==0) return b;
    else return Func(b%a, a);
}
int main() {
    Func(72, 108);
    return 0;
}
```

6. (10%) Write a program to input an integer and print if it is odd/even and prime/nonprime.

1<sup>st</sup> run:

Enter an integers: 43

43 is odd; prime. // 43 是奇數，質數

2<sup>nd</sup> run:

Enter an integers: 78

78 is even; nonprime. // 78 是偶數，非質數
