

淡江大學九十四學年度碩士班招生考試試題 ⁶³⁻¹

系別：土木工程學系

科目：工程力學(靜力學、材料力學)

| 本試題共 1 頁 | |

1. For the frame and loading shown in Fig. 1. 20%
 - (a) Determine the components of all forces acting on member ABE,
 - (b) Determine the internal forces at point J.

2. A beam of T-section is supported and loaded as shown in Fig. 2. 20%
 - (a) Determine the maximum tensile and compressive stresses,
 - (b) Determine the maximum shear stress in the web.

3. A cantilever beam AB of length L has a fixed support at A and a spring support at B as shown in Fig. 3. The spring behaves in a linearly elastic manner with stiffness k. 20%
 Use the second-order differential equation of the deflection curve to calculate the downward displacement of end B of the beam.

4. A pole of hollow circular cross section as showed in Fig. 4 supports a sign. The pole weighs 500 lb and the sign weighs 400 lb. The wind pressure against the sign is 0.5 psi. 25%
 Determine the maximum tensile, compressive, and shear stresses at point A, which is on the outer surface of the pole at the front of the pole.

5. Explanation: 15%
 - (a) Buckling
 - (b) Offset yield stress
 - (c) Relaxation
