本試題共 1 頁

25 points each

1. Discuss the circumstances under which the monetary and fiscal policy multipliers are each, in turn, equal to zero. Explain in words why this can happen and how likely you think this is.
2. An open economy is inherently more stable than a closed economy in the simple Keynesian model. Why is that? Recent experiences shown during the 1997 Asian financial crisis has the opposite results. What was going wrong? Explain carefully.
3. What is a natural rate of unemployment? Describe factors that affect the shift in natural rate of unemployment?
4. Channels through which changes in interest rate affect the economy are of multi-magnitude, list and contrast with each of them within both a closed economy and an open economy.
