The core sub-fields of Linguistics each treat a specialized area of linguistic knowledge (phonological, morphological, syntactic, semantic, pragmatic, etc.). While most linguistic theories assume that each of these areas (or levels) of linguistic knowledge is distinct from the others, no theory assumes they are absolutely independent of each other. That is, they interact in crucial but restricted ways. Choose three pairings of linguistic subfields from the list below and explain and illustrate how the two areas in that pair interact. (Though there are other possible pairings that are not listed below, choose only from the list given there.) For example, if you choose the Phonology-Morphology pair, then explain and illustrate how phonology and morphology interact with each other. Do this for each of the three pairs you choose. Use English for all of your examples. Again, choose any three of the five pairs listed.

Phonology-Morphology

Morphology-Syntax

Syntax-Semantics

Semantics-Pragmatics

Syntax-Pragmatics
